

# EL PASO COUNTY DRAINAGE BASIN PLANNING STUDY SYSTEM

## FUTURE

It is recommended that the County use this methodology on multiple drainage basins to realize the greatest cost savings. A funding program for Drainage Basin Planning Studies and for Small Area Comprehensive Planning has been developed through development fees. These fees will become available for contracting of drainage basin planning studies by El Paso County.

Success of this process is completely dependent upon:

1. Availability of funds for contracting restudies and new studies
2. Availability and ease of obtaining digital GIS data
3. Requirement for development data/As-Builts to be provided in a format acceptable for inclusion into the County GIS database

The Beaver Creek Drainage Basin will be the first studied under the El Paso County SIMMS process.
